

Norbord®

make it better

 **SterlingOSB Roofcoat®**

**Specially coated to eliminate
construction delays due
to weather**

Outright Sealing Better

The unpredictability of the weather in the UK causes thousands of lost construction hours.

There is a clear demand for products that ensure a structure is made weather tight as quickly as possible. The advent of modern roofing membranes has helped to address this issue but these are often expensive and require specialist skills.

SterlingOSB Roofcoat with its weather resistant waxy surface is the perfect answer for flat roof usage, including building extensions, where traditional roofing felt is the preferred choice.

Suitable for

- Traditional Flat roofing
- Building extension roofing
- New & Refurbishment roofing projects

SterlingOSB Roofcoat is readily available compared to plywood because it is manufactured in the UK.

In addition, it is more environmentally friendly than plywood because of the materials we use, the way we manufacture it and the number of miles clocked up transporting it.

That's why we say about it, as we do all our products – it's better by nature.

The benefits of SterlingOSB Roofcoat at a glance

- Water resistant, wax-based coating + Peel-off film
- Eliminates weather delays during construction phase
- Easy to fix, clean to use
- Peel-off Film can be torched or easily removed prior to felting
- Use with a durable waterproof cloth-based tape to protect joints during construction phase
- Cost effective flat-roofing solution versus imported plywood

Plus all the inherent benefits of SterlingOSB
